

# FastAPI fashion design analysis application

Build an automated scraping engine for [mytheresa](#)

The engine should be able to scrape:

- 500 men clothing pictures
- 500 women clothing pictures
- 20 gucci items under 1000
- 50 elie saab items
- 100 men shoes

Build fastAPI app that:

- accepts an image from the scraped data as input
- uses a bedrock model that captions the image in details
- handles edge cases and unexpected user input

Your work will be assessed base on the following:

- Clean code (best practices)
- Readability of the github repo
- Comprehensive technical documentation

Deliverables:

- A github repo containing the automated scraping engine with the fastapi app
